

Water Safety & Rescue Training

Maritime and
Coastguard Agency

Water safety / rescue training with Birmingham & Midland Marine Services Ltd.

All DEFRA compliant water safety & rescue training delivered by BMMS Ltd is run to the exacting and high standards set out in the Government paper, the 'Flood Rescue Concept of Operations'

In layman's terms: This sector can be a 'minefield' – Let's try and make it easier! There are three 'general' options, before it gets technical, and most times we find that clients need the 1st option; DEFRA Module 1) run to the Annex 'H' syllabus, a 1-day course.

If you need higher level, it's the second option, the third one is a very basic course with no planned entry to the water.

Commercial Vessel Water Safety Training is detailed below and is both Accredited & Audited by the [Maritime and Coastguard Agency - GOV.UK \(www.gov.uk\)](http://www.gov.uk)

For companies and organisations working 'outside' the remit of the DEFRA Flood Rescue Concept of Operations' there are other course options via British Marine which provide HSE and CDM Regulations compliance.

Inland Water Safety Management and Marina Water Safety Management

Option A) DEFRA Module 1) Annex 'H' syllabus. 'Water Safety and Rescue Awareness'.

This version of the course was introduced by DEFRA in November 2019 specifically for non-blue-light personnel supporting flooding incidents. It has since become the benchmark qualification for industry, including the civil engineering, construction, maintenance, rail, utilities, inspections, vegetation management, and environmental sectors and is the preferred qualification for Environment Agency contractors.

Especially prevalent for personnel with planned entry to the water; (limited to wading depth - non-buoyant), The Annex 'H' syllabus covers working site assessment,

medical considerations, hierarchy of rescue and the rescue protocol, lifejacket and full rescue grade aquatic PPE training, team shore-based and shallow water rescue techniques, wading as an individual and as a group, dealing with entrapments, co-worker rescue and self-rescue techniques.

We strongly advise undertaking training outside the mid-June to mid-September period due to low water levels and benign, warm conditions. Higher grade venue available year-round at Mod 2) surcharge rate.

Summary:

Candidates do enter the water, therefore a basic swimming ability is required for this course. This is the Environment Agencies' basic level requirement. 1-day training course. The qualification lasts for 3-years if CPD is maintained.

Group size:

Group bookings and individual places can be accommodated. Max x8 candidates per course.

Cost per candidate:

Availability and costs can be obtained from the office:

office@midlandmarine.co.uk

Option B) DEFRA Module 2) 'Water Rescue First Responder'.

This course was designed for the Emergency Services responding to wider area flooding events, 'Water Rescue First Responders' rather than industry. Popular with Lowland Rescue personnel.

This training gives the candidates greater exposure to a high-grade water, more experience, and the skills to 'support' Water Rescue Technicians (DEFRA Mod 3 personnel) undertaking their role and is not advised for poor to average swimmers.

Where companies (outside a blue-light remit) feel the need for more in-depth training for their personnel; where more technical equipment is to be used, this two-day course covers searches, rescue sleds, strainer drills, introduction to rescues from vehicles, tethered wades and sleds, in addition to that covered in the Annex 'H' course above.

Venue:

Day-1 is run at our principal training centre in Gailey, Staffordshire. 'High grade water' training is delivered on day-2 in Llangollen, North Wales.

Summary:

A 2-day training course. Candidates do enter the water.

A competent level of swimming ability and good level of physical fitness is required for this course.

This course is usually above and beyond the requirement for non-blue-light personnel if delivered correctly to current DEFRA guidance and industry standard. The qualification lasts for 3-years if CPD is maintained.

Note: Module 2. was the 'go-to choice' for personnel working in-water prior to the revised DEFRA guidance issued in November 2019 and still current – now superseded by Annex 'H' in 'most' instances.

Group Size:

Bookings accepted for six to seven candidates. (max)

Cost per candidate:

- Please contact the office on office@midlandmarine.co.uk or telephone 01902 544329 to discuss your requirements.

Option C) Shorebased – ‘Standard’ DEFRA

Module 1) ‘Water Safety Awareness’.

Aim: Highlight the dangers of working near water

Scope: This basic DEFRA training module is designed to make responders who may, as part of their role, work near water aware of the hazards associated with water and the flooded environment. The dangers of working near water are explained and basic safety measures are introduced. The session includes awareness of water-related hazards, water hydrology, typical water and flood search and rescue scene organisation, principles of water safety, varying rescue options including low to high risk options, and introduction to basic water safety.

Summary:

Candidates do not enter the water, so no swimming ability is required for this course.

For personnel working in a shorebased position in the wider flood resilience support sector and covers the basics for Canalside working under current Canal & River Trust guidelines.

½ day training course.

Qualification lasts for 1-year.

Group size:

Bookings accepted on a minimum of SIX candidates. Max 12 per course.

Cost per candidate:

Availability and costs can be obtained from the office on 01902 544329 or office@midlandmarine.co.uk

Water Safety & Rescue training courses with Birmingham & Midland Marine Services Ltd are DEFRA, HSE and CDM Regulations 2015 compliant, delivered by our specialist rescue instructors from both Lowland Rescue and Fire and Rescue Services backgrounds.

Our instructor qualifications far exceed the DEFRA Con-Ops standards, our emergency response systems are fully audited: For our client's peace of mind.

Courses are accredited, certificated and audited by Outreach Rescue and the Institute of Search and Technical Rescue.
